Quadrilateral Family Tree Story **By Ms. Worden**

Once upon a time there lived the Quadrilateral family. There were three kids in the family. Kite, Trapezoid and Parallelogram.

Kite, Trap and Para all had four sides like their parents, but they looked different as siblings always do.

Kite had one set of nearby (adjacent) sides the same length and another set of nearby (adjacent) sides of the same length. She grew up to fly and hang out with Ben Franklin.

Trap had one pair of parallel sides. Trap didn't like to fly. He preferred to stay on the ground. One set of parallel sides helped him stay sturdy. In fact, he was so sturdy and strong, he grew up to be the base of triangle.

Para became an Olympic runner. Her two sets of parallel sides let her run fast. She ran so fast, it still looks like she is dashing off to her next race.

Parallelogram had two little parallelogram children, Rhomus and Rectangle. They were the Parallelogram family!

Rhomus was such a perfect little parallelogram - all his sides were equal! Rectangle was a little parallelogram, too. She was not fast like mom, but she was really smart. She had all right angles!

One day, Rhombus and Rectangle wanted a pet. "I want a triangle!" exclaimed Rhombus. "I want a circle!" shouted Rectangle.

"Ok," mom said. "No more arguing! Let's look for a pet that you'll both like."

They looked at around at the shape shop. Then, they spotted it. A square!

It had all right angles, just like Rectangle. It had all equal-length sides like Rhomus. It fit perfectly into the Parallelograms family.
